TYPICAL SHAFT WALL CONSTRUCTION

FIRE RATING	E120 E120Sa
FIRE STOPPING	INTUMESCENT ARCRYLIC SEALANT QUENCH FIRE-STOPPING
ACOUSTIC RATING	N/A 35dB 36dB 39dB

Results declared reflect the optimum achievable within the limitations of the test standard and sites specific average results may vary where building elements of different materials interface altering natural acoustic deflection.

ABOVE TO BE SPECIFIED AS REQUIRED

Please note:

Wall build up to be certified by others.

Selo are not the designers responsible for any wall detail if shown, you should know that we are not aware of any fire test evidence for wall constructions which are not, standard as defined in EN1363-1:2020, nor is it our responsibility to establish if such evidence exists. Tested detail in accordance with EN1634-1, requires standard supporting wall constructions with a minimum of 200mm either side and above door frame. Flexible wall construction requirement is a minimum of 300mm between apertures. Minimum upstand in flexible standard wall construction 100mm. Outside of these minimum dimensions specific fire test evidence should be sought.

All requirements of the Fire resistance field of application report from Warringtonfire, for the Selo product/s included in this drawing must be ensured, or an alternative fire assessment for any deviation including non-standard wall details must be sought from a competent and designated body for producing fire resistance assessments.
